100% DATA DESTRUCTION

WHY HARD DRIVE DESTRUCTION?

We want to provide the highest level of data security possible to our donors, which is hard drive destruction. Hard drive destruction is 100% secure. We can still reuse the computer by installing a new hard drive.

OUR DESTRUCTION PROCESS

Hard drives are placed inside a specialized machine and a conical punch inside the unit delivers a staggering 12,000 pounds of hydraulic force, causing catastrophic trauma to the hard drive's chassis while destroying its internal platter. Our process is in accordance with various government regulations and industry standards (HIPAA, FACTA, SOX, PCI DSS, etc.).

ON-SITE DESTRUCTION

You can bring your computers and hard drives to us or InterConnection can bring its hard drive destruction service to your office. Services include:

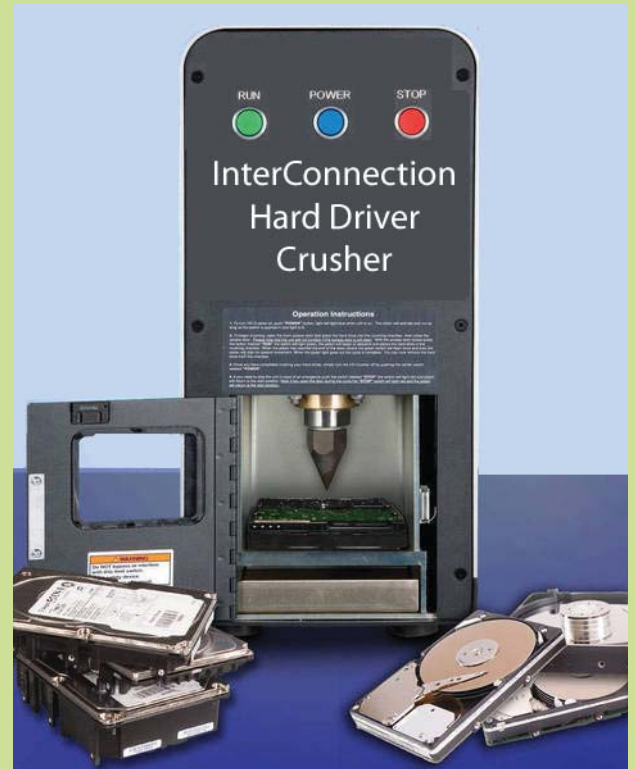

- Removal of hard drives on-site.
- Bar code and recording of each hard drive's serial number.
- Destruction using our quiet hard drive crusher.
- Video recording of process if requested.
- Free recycling of hard drives and computers.
- Certificate of Destruction

CHARITABLE REUSE OPTION

We are the largest charitable computer reuse program in Washington State. We provide computers to individuals or organizations in need of technology. As a certified 501c3 non-profit organization, we provide receipts for tax-deduction purposes. Non-useable computers are recycled in-house.

COST

All computers and hard drives are recycled for free. Cost to remove and destroy each drive is \$10 per unit. Contact us about discounts for large quantities of hard drives.
